M JUNAID ALI KHAN

SQA Lead / QA Head / QA Manager

Karachi, Pakistan | +92 346 2766940 | junaid.ubit123@gmail.com | LinkedIn | GitHub Portfolio

PROFESSIONAL PROFILE

Quality Assurance Professional with 7.5+ years of experience, including 3+ years in QA Lead roles and 1+ year heading a QA department. Experienced in leading and mentoring QA teams, managing workloads and resources, establishing team performance KPIs, monitoring QA effectiveness, and driving continuous improvement in testing processes and delivery quality. Skilled in shift-left testing and quality governance, driving early QA involvement across the SDLC to identify risks sooner and strengthen release confidence. Strong expertise across FinTech, RegTech, AML/KYC, Digital Onboarding, Identity Verification, Sanctions & Watchlist Screening, and Phonetic & Fuzzy Name-Matching Systems for financial institutions. Hands-on experience across Web, Mobile, and enterprise financial applications, with expertise in test automation, CI/CD, data validation, and regression engineering using Cypress, Playwright, and GitHub Actions. Adopted AI-assisted QA practices using Claude AI to accelerate test-case generation, automation development, regression scripting, and data-validation workflows—reducing repetitive manual effort, improving automation efficiency, and expanding regression coverage.

KEY PRODUCTS & DOMAINS

FinTech & Regtech • AML/KYC & Digital Onboarding • Identity & Biometric Verification • Risk & Compliance Solutions • Sanctions & Watchlist Screening • Phonetic & Fuzzy Name-Matching Algorithms • Investment & Capital Markets • Enterprise & Consumer Applications • Digital Talent & Workforce Platforms • Digital TV & Streaming Applications • Aviation DCS

EXPERIENCE

Idenfo — UK

Idenfo is an AML/KYC fintech company providing digital onboarding, identity verification, watchlist/sanctions screening, and compliance data solutions to banks and financial institutions across the region.

Head of Software Quality Assurance

Jul 2025 – Present

- Promoted from SQA Lead in recognition of scope of ownership and consistency of delivery; head the QA department for Idenfo's KYC/AML onboarding platform, defining test strategy, test plans, and quality gates across the full SDLC/STLC.
- Led QA validation of digital identity-verification and onboarding applications, covering facial verification, biometric verification, liveness/anti-spoofing controls (Level 1 and 2), face/screen-detection models, fingerprint verification, and NFC e-passport verification, testing identity-verification journeys and SDK/app integrations across positive, negative, edge-case, and spoofing scenarios.
- Built an AI-assisted automation workflow with Claude AI and browser-based MCP that turns product use cases into Cypress/Playwright regression scripts, pushed to GitHub and run daily via GitHub Actions, reducing manual coding effort and automation turnaround time.
- Adopted Claude AI as a core QA tool for test-case generation, regression suites and data-validation logic, driving the team’s shift toward AI-driven QA practices.
- Designed a 55-check, four-phase data validation pipeline for a banking client’s watchlist screening data, validating records across raw, platform, Excel and XML formats with AI-assisted Python scripts, run on schedule via GitHub Actions with AWS S3 input and automated email reports via AWS SES.
- Owned the testing strategy for the AML name-screening engine, defining how phonetic and fuzzy-matching algorithms (Soundex, Metaphone, Double Metaphone) are validated, and built a reusable multi-language name test library (Arabic, Russian, Pakistani) with Python and Claude AI so that similar-sounding and misspelled names are reliably caught against watchlists.
- Validated LLM-generated (Perplexity-based) name-screening hits against watchlist, PEP and sanctions data and the existing rule-based engine, testing ambiguous, partial and alias-based matches for accuracy, false positives/negatives and hallucinations, leading to refined prompt logic and more accurate matching.
- Lead and mentor the QA team on testing methodology and tooling, and continue to own CI/CD pipelines on GitHub and Jenkins for automated testing and deployment.

Lead Software Quality Assurance

Mar 2022 - Jul 2025

- Led the QA team for Idenfo's KYC/AML onboarding platform — planning and assigning testing work, reviewing team members' test cases and results, and acting as the main point of contact between QA and development on quality issues.
- Defined test plans and quality criteria across multiple phases of the testing cycle for Idenfo's KYC/AML onboarding platform, with deep working knowledge of AML/KYC compliance and name-screening requirements.
- Directed end-to-end automation of the 12-step product onboarding journey (login, configuration, onboarding, alerts, risk rating, name screening, KYC approval, and final verification), producing structured Expected-vs-Actual QA reports for critical flows such as risk rating and fuzzy-logic name screening.
- Set up and maintained CI/CD pipelines on GitHub and Jenkins to automate testing and deployment, and provided training and mentorship to QA team members on testing methodologies and tools.

Additional Product Assignments

Ping Up *2023 - 2024*

Digital investment and financial-services application focused on online investment and digital investor onboarding.

- Led QA activities for Ping Up, defining and coordinating test strategy, test scenarios, regression coverage, and release validation across key customer and investment workflows.
- Led end-to-end testing of the digital investment onboarding journey, covering customer registration, information capture, verification, onboarding completion, and investment readiness.
- Coordinated with Development and Product teams on requirements, quality risks, and defect prioritization; managed release readiness and regression impact for new features, and reported QA status, defects, and risks to stakeholders.

Sortitt *2024*

A digital talent platform connecting businesses with vetted global professionals through flexible workforce solutions, talent matching, assessments, and digital onboarding.

- Led QA activities across critical talent-platform workflows, including professional onboarding, talent discovery and matching, assessments, interview workflows, availability/capacity management, and client-facing journeys, defining and executing risk-based functional, integration, regression, and end-to-end testing strategies.
- Worked closely with Product, Development, and business stakeholders to review requirements, identify quality risks, manage defects, and ensure alignment between product functionality and business requirements.

Sr. SQA Engineer *Sep 2020 - Feb 2022*

Convex Interactive Pvt. Limited — Karachi

Convex Interactive is a software house delivering web and mobile products for clients across energy, capital markets, and media/entertainment sectors.

- Tested and verified releases for multiple products in a Scrum/sprint-based environment, executing test cases in Zephyr and logging defects in Jira.
- Automated mobile app testing using Appium across Android and iOS applications.
- Delivered QA across client and in-house products including PSO (Pakistan State Oil), SSGC Android/iOS app, NCCPL (National Clearing Company of Pakistan), and in-house products Mjunoon.tv, Zong TV, and Tamasha App.

SQA Engineer *May 2018 - Jul 2019*

RIKSOF — Karachi, Pakistan

- Worked as an SQA Engineer on web and mobile-based software products, performing functional, regression, integration, and user acceptance testing while collaborating with development teams to identify and resolve product defects.

Jr. QA Engineer *Feb 2017 - Nov 2017*

SpurSol — Karachi, Pakistan

- Worked on business-focused software and SaaS products, performing manual testing, preparing test cases, executing functional and regression testing, and reporting defects throughout the development lifecycle.

Intern SQA Engineer *Mar 2016 - May 2016*

Cubix — Karachi, Pakistan

- Gained hands-on SQA experience on software and mobile application projects by assisting with functional testing, test case execution, defect reporting, and regression testing.

LEADERSHIP & MANAGEMENT

- **QA Strategy & Quality Governance** — Define QA strategy, testing standards, quality gates, release criteria, risk-based testing practices, and QA sign-off processes across products and delivery cycles.
- **Shift-Left Quality Practices** — Drive early QA involvement in requirements, acceptance criteria, test planning, risk identification, and quality discussions to identify issues earlier in the SDLC and reduce downstream rework.
- **Team Leadership & Mentoring** — Lead, mentor, and support QA engineers through task allocation, test-case reviews, technical guidance, knowledge sharing, and continuous improvement.
- **Performance & KPI Management** — Establish and monitor QA team KPIs covering test execution, defect quality, regression coverage, automation progress, release readiness, production quality, and adherence to QA processes.
- **Resource & Workload Planning** — Plan QA capacity, prioritize testing activities, allocate resources based on project risk and release timelines, and manage competing priorities across multiple initiatives.
- **Release & Quality Governance** — Own QA readiness and sign-off processes, ensuring critical defects, regression coverage, testing scope, and identified risks are reviewed before release.
- **Stakeholder Management** — Collaborate with Product, Development, DevOps, Project/Delivery, and business stakeholders to communicate quality status, risks, dependencies, and release readiness.

CORE QA & TECHNICAL SKILLS

- **Methodologies**: SDLC/STLC, Agile/Scrum, manual & automation testing, risk-based & shift-left testing, UAT
- **Test Automation**: Playwright, Cypress, Selenium, Appium, Page Object Model
- **Programming & Scripting**: JavaScript, TypeScript, Python (test data generation, openpyxl)
- **API & Performance Testing**: REST API testing, Postman, JMeter
- **CI/CD & Version Control**: GitHub Actions (scheduled regression jobs), Jenkins, Git, GitHub
- **Test Management**: Jira, Zephyr, Trello
- **Cloud & Data**: AWS S3, AWS SES, Microsoft Azure, data validation with Python (openpyxl)
- **Enterprise Applications**: Microsoft Dynamics 365
- **AI-Assisted QA**: Claude AI, MCP browser automation, LLM output validation, regression scripts from product use cases

EDUCATION

Bachelor of Computer Science (4-Year Degree Program) *2012 - 2016*

Department of Computer Science, UBIT, University of Karachi

Intermediate *2010 - 2012*

Govt. Delhi College, Karachi
